## Fuel Injection System Description

DL1000A motorcycles are equipped with a fuel injection system for emission level control. This fuel injection system is precision designed, manufactured and adjusted to comply with the applicable emission limits. With varying engine conditions, all of the fuel injection volumes are precisely controlled by the programmed injection maps in the ECM to reduce CO, NOX and HC. Adjusting, interfering with, improper replacement, or resetting of any of the fuel injection components may adversely affect injection performance and cause the motorcycle to exceed the exhaust emission level limits.

[A]:	Before-pressurized fuel	1.	Fuel tank	4.	Fuel feed hose	7.	Fuel filter (For high pressure)
[B]:	Pressurized fuel	2.	Fuel pump	5.	Fuel delivery pipe	8.	Fuel injector
[C]:	Relieved fuel	3.	Fuel mesh filter	6.	Fuel pressure regulator
